

HP V2 DDR4 U-DIMM

High performance and high-end quality

HP V2 DDR4 memory module is specially designed for users in pursuit of upgraded memory performance and cost-effective memory, which is suitable for desktops. It provides excellent compatibility and stability and higher data processing capacity, also supports multi-tasking switching, and can deeply stimulate the system potential.

Product Features

■ Improved performance and high speed

The new generation of DDR4 memory module, including which main frequency is up to 2,400 ~ 2,666MHz. It can significantly improve the performance and accelerate the response to application loading. With HP V2 DDR4 memory, the PC will be free of freeze and lag, and suitable for home entertainment, office work, Internet cafes, and teaching applications.

■ High quality flash and reliable testing

As the selected high-quality flash subjected to rigorous test throughout process in line with JEDEC standards, each product has excellent performance and stability.

■ Extensive compatibility and outstanding stability

Passed the major motherboard brands compatibility test to ensure stable and long-term operation on different platforms.

■ Energy-saving and high workload

Keep running at low voltage of 1.2V, high performance & low power consumption. Improving the stability of continuous high strength workload operation. In line with the RoHS environmental protection standards.

HP SSD Advantages

With continuously improved storage technology, HP SSD provides customers with the latest storage solution of high performance in the server and consumer market. Compared with HDDs, HP SSD can improve the performance of your entire system, providing: superior performance, improved start-up time, faster application load times, longer battery life, and better vibration resistance.

As the leader in the PC industry, HP SSD quality assurance begins at the R & D design stage and continues through the whole production process. Quality is designed into every product in accordance with HP's corporate philosophy. HP SSD fully supports HP computer DST self-test to ensure the reliability in use.

HP has an excellent global network of service outlets to support users with questions about the product. We also offer a toll-free customer support hotline, and you can find more details from our HP website.

HP V2 DDR4 U-DIMM Specifications

RAM	DDR4
DIMM	U-DIMM
Data Rate	2400MHz/2666 MHz
CL	CL17/CL19
Density	8GB/16GB
Rank	1Rx8/2Rx8
DRAM	512Mbx8/1Gbx8
Voltage	1.2V
Operating temperature	0°C ~ 85°C
Dimensions	133.25x31.25x3.90mm
Weight	≤ 16.5g
Pin	288 Pin
Limited Warranty	5 years
Certification	RoHS, CE, FCC
Reminder	The picture is only for reference, please make the object as the standard
